

ODISHA POWER TRANSMISSION CORPORATION LIMITED VOL-II (PART-II)

PACKAGE: 14/2013-14 -

- (i) Construction of 220 KV 2 Phase line on DC tower from 220/33 KV Sub-station, BONAI to RTSS BIMLAGARH & associated one no. 220 KV Feeder bay extension at BONAI sub-station for power supply to Bimlagarh RTSS on turnkey basis. (Approximate length of the 220 KV line: 20.218 Kms).
- (ii) Construction of 132 KV DC line (4 conductors) on DC tower from 132/33 KV Sub-station, BRAJARAJNAGAR to RTSS BELPAHAR & associated two nos. 132 KV Feeder bay extension at BRAJARAJNAGAR sub-station for power supply to Belpahar RTSS on turnkey basis. (Approximate length of the 132 KV line: 12.754 Kms).
- (III) Diversion of 132 KV JHRSUGUDA-M/S ULTRTECH CEMENT Line from Location No. 57(192) to 63 from the premises of M/S IOCL, Malimunda, Jharsuguda on turnkey basis. (Approximate length of the 132 KV line: 1.844 Kms).
- (iv) Diversion of 132 KV SAMBALPUR-RAJGANGPUR Line from Location No. 201 to 204 from the premises of M/S IOCL, Malimunda, Jharsuguda on turnkey basis. (Approximate length of the 132 KV line: 1.582 Kms).
- (v) Diversion of 132 KV RAJGANGPUR-ROURKELA S/C Line(Ckt-II) near Kansabahal due to expansion of SH-10 from Sambalpur to Rourkela on turnkey basis. (Approximate length of the 132 KV line: 2 Kms).
- (vi) Diversion of 132 KV ‰+off line at 132/33 KV SAMBALPUR sub-station due to four laning of SH-10 from Sambalpur to Rourkela on turnkey basis. (Approximate length of the 132 KV line: 0.17 Km).

ADDITIONAL TECHNICAL REQUIREMENT FOR 400 KV,220KV & 132KV CVT

- 1. Rated capacitance of the CVT
- 2. High frequency capacitance for entire carrier frequency range.
- 3. Equivalent series resistance over the entire frequency.
- Stray capacitance and stray conductance of the LV terminal over entire carrier frequency range.
- 5. Capacitance (PF) /Tan delta between:
 - a) HV-HF point
 - b) HF point-Ground point of International Transformer.
 - c) HV-Ground point of Intermediate Transformer winding.
- 6. Capacitive reactance of the two parts of the divider i.e. High voltage capacitor, and Intermediate voltage capacitor, connected in parallel.
- 7. Total Inductive reactance, offered by CVT.
- 8. Voltage ratio of the capacitor divider.
- 9. Open circuit Intermediate voltage.
 - 10. Rated open circuit Intermediate voltage.
- 11. Reference range of temperatures within which the CVT complies with the relevant accuracy requirements.
- 12. Protective device, in-corporate in the CVT for limiting over voltages and/or to prevent sustained Ferro resonance.
- 13. Rated voltage of Surge Arrester, connected at the secondary of CVT.
- 14. Natural frequency of coupling (KHZ).
- 15. Self tuning frequency of CVT (KHZ).
- 16. Bandwidth (KHZ).

- 17. Temperature rise over ambient.
- 18. One minute power frequency test voltage of secondary winding (KV).
- 19. One minute power frequency test voltage of H.F. terminal (KV).
- 20. One minute power frequency test voltage of capacitor (dry & wet) (KV).
- 21. 1.2/50/micro second Impulse withstand test voltage of capacitor (KVP).
- 22. 250/2500 micro second switching surge withstand voltage of capacitor (dry & wet).
- 23. Literature Whether the followings are enclosed?
- Type Test reports as per IEC 186. 23.1
- 23.2 OGA drawing of CVT and terminal connector.
- 23.3 Characteristic curves.
- 23.4 Drawing showing clearance from earthed object.
- 23.5 Details of Surge Arrester, connected at secondary winding of CVT.
- **ELECTROMAGNENIC UNIT:-**24.
- 24.1 **CORE:-**
 - Core diameter (mm) a)
 - b) Window Weight (mm)
 - Leg centre (mm) c)
 - Net cross sectional area of iron d) In the core (mm²)
 - e) Core lamination thickness (mm)
 - Type & grade of core. f)
 - Design flux density at rated voltage. g) And rated frequency (Tesla)
 - Design flux density at highest system voltage h) & lowest system frequency (Tesla).
 - Minimum knee point voltage (volts). i)

24.2 PRIMARY WINDING:-

- No. of turns. a)
- Bare size of conductor b)
- Insulated size of conductor. c)
- d) Area of cross section.

- Current density (A/ mm²). Conductor material. e)
- f)
- g) Class of insulation.
- Power frequency withstand level. h) (KV-rms).
- Impulse withstand level (KVP). i)

10.2 Type

10.3 Rated KVA

- 10.4 Over current impedance (ohms)
- 10.5 Input line winding connection in vector representation
- 10.6 Rated primary voltage (volts)
- 10.7 Rated secondary voltage (volts)
- 10.8 Rated frequency (Hertz.)
- 10.9 Rated output (amps)
- 10.10 Turn ratio
- 10.11 Insulation level
- 10.12 Impulse withstand test voltage (KVP)
- 10.13 One minute power frequency over voltage.
 - (a) Primary winding (KV-rms).
 - (b) Secondary winding (KV-rms)
- 10.14 Material of primary winding conductor
- 10.15 Material of secondary winding conductor
- 10.16 Size, Cross-sectional area and current density of primary winding conductor.
- 10.17 Size, cross-sectional area and current density of secondary winding conductor
- 10.18 No. of turns of primary / phase
- 10.19 No. of turns of secondary / phase
- 10.20 Name of the insulating materials used and class
- 10.21 Core
- 10.21.I Name of the core material
- 10.21.II Grade of the core
- 10.21.III Thickness of core material (mm)
- 10.22 Maximum temperature rise over an ambient temperature of 50°C
 - (a) Primary Winding (⁰C)
 - (b) Secondary Winding (⁰C)
 - (c) Core (^{0}C)
- 10.23 standards applicable
- 11.0 RECTIFIER ASSEMBLY:

- 11.1 Make
- 11.2 Type of semi conductor material
- 11.3 Rated direct current per cell (A)
- 11.4 Rated direct voltage (V)
- 11.5 Rated input voltage (V)
- 11.6 Type of connections of rectifier elements.
- 11.7 Forward power loss and reverse power loss (watts).
- 11.8 Forward voltage drop and reverse voltage drop (volts)
- 11.9 Conversion efficiency (%)
- 11.10 Rated DC output voltage (V)
- 11.11 Rated AC input voltage (V)
- 11.12 Rated output current (A)
- 11.13 Ripple factor
- 11.14 Voltage factor
- 11.15 Current factor
- 11.16 Maximum temperature rise over an ambient temperature of 50°C (°C)
- 11.17 Maximum permissible ambient temperature for guaranteed rating (°C)
- 11.18 Maximum and minimum permissible humidity rating (%)
- 11.19 Life expectancy (years)
- 11.20 Standard(s) applicable
- 11.21 Characteristic curve of DC output plotted against output current (Whether submitted?) Yes / No.
- 12.0 AUTOMATIC VOLTAGE REGULATOR
- 12.1 manufacturerøs name
- 12.2 Manufacturerøs type
- 12.3 Percentage stabilisation of the rectifier with the help of AVR when
 - (a) Input voltage changes with \pm of its nominal value.
 - (b) DC output of the rectifier varies from no-load to full load.
- 12.4 Rated output voltage

- 12.5 Allowable AC frequency fluctuations
- 12.6 Voltage setting range
- 12.7 Response time of automatic voltage regulator
- 13.0 Manual voltage regular (float mode)
 - 13.1 Type
 - 13.2 Voltage setting range
- 14.0 Boost charging current setting range
- 15.0 Boost charging limit setting range
- 16.0 DIODES
- 16.1 Manufacturerøs name
- 16.2 Type of circuit
- 16.3 Method of construction
- 16.4 Continuous current rating (Amps.)
- 16.5 Short time current rating (Amps)
- 16.6 Type of cooling
- 16.7 Forward power loss and reverse power less (W)
- 16.8 Life expectancy
- 16.9 Forward voltage drop on rated current
- 16.10 Resistance offered for reverse current flow
- 16.11 Maximum temperature rise over an ambient temperature of 50^{0} C.
- 17.0 CONTACTORS / MOULDED CASE CIRCUIT BREAKERS
- 17.1 Type
- 17.2 Make
- 17.3 Rated voltage (V)
- 17.4 Rated continuous currents (A)
- 17.5 Contact material
- 17.6 Operating coil
- 17.6.1 Voltage (V)
- 17.6.2 Voltage range and power for closing and holding

- 17.6.3 Voltage range and power for drop off.
- 17.7 Thermal trip rating
- 17.8 Thermal trip time
- 17.9 Details of CT if any
- 17.10 Auxiliary contacts
- 17.10.1 Number
- 17.10.2 Current rating
- 17.11 Characteristics of back-up HRC fuse

18.0 RELAYS:

- 18.1 Make and type of protective and alarm relays
- (a) Thermal overload relay
- (b) Input under voltage relay
- (c) Single phasing alarm relay
- (d) Phase reversal relay
- (e) D.C. output over-voltage relay
- (f) D.C. output under voltage relay
- (g) Charger failure relay
- (h) Battery earth fault relay
- (i) A.C. input failure relay (for connecting the D.C. load)
- (j) Fuse failure relay
- (k) Alarm accept relay
- 18.2 Rated voltage of each of the above
 - (a) AC/DC
 - (b) Permissible variation
 - (c) Frequency
- 18.3 VA burden of each of the above
- 18.4 Operating time of each of the above
- 18.5 Time vs current curves of each of the above. (to be enclosed alongwith the offer)
- 18.6 Reset time

- 18.7 Accuracy
- 18.8 Setting range
- 18.9 Reset factor
- 18.10 Number of contacts
 - (a) Normally open
 - (b) Normally closed
- 18.11 Rating of contacts
 - (a) Rated Voltage (V)
 - (b) Rated making and breaking
 - (c) Continuous rating
- 18.12 No. of operations
- 18.13 Operation indicator

19.0 INDICATING LAMPS

- 19.1 Manufacturer s name
- 19.2 Type and designation
- 19.3 Permissible voltage variation
- 19.4 Rated power consumption (watts).
- 19.5 Series resistance, if any
- 20.0 SWITCHES:
- 20.1 Manufacturerøs name
- 20.2 Ratings
 - (a) Continuous current
 - (b) Short circuit ó making capacity
 - (c) Breaking capacity
 - (d) Voltage
- 20.3 Operating mechanism details
- 20.4 Type of visual indication
 - (a) OFF and ON position
 - (b) Fuse blow out

21.0 FUSES

- (a) Make
- (b) Type
- (c) Rating (Amps)
- (d) Interrupting rating (KA)

22.0 INSTRUMENTS

- 22.1 Manufacturerøs Name
 - (a) Ammeter
 - (b) Voltmeter

22.2 Type

- (a) Ammeter
- (b) Voltmeter

22.3 Standard

- (a) Ammeter
- (b) Voltmeter

22.4 Scale range

22.4.1 Ammeter

- (a) Float charger
- (b) Boost charger
- (c) Battery float
- (d) Battery boost

22.4.2 Volt meter

- (a) Input supply
- (b) Charger output
- (c) Load

22.5 Size of dial

- (a) Volt meter
- (b) Ammeter

22.6 Accuracy class

- (a) Volt meter
- (b) Ammeter
- 22.7 Temperature at which calibrated
- 22.8 Limit of errors

- 22.9 Out line dimensions
- 22.10 Type of mounting
- 22.11 Selector switch for volt meter (AC & DC)
 - (a) Make
 - (b) Rating

23.0 CAPACITOR

- 23.1 Manufacturer s name
- 23.2 Type
- 23.3 Capacitance (Farad)
- 23.4 Maximum temperature rise over an ambient temperature of 50°C.
- 24. Reference float voltage at ambient temperature of 27^oC
- 25. Whether protection is given for float voltage to Avoid low battery voltage due to sensor or circuit Malfunction. (Yes/No).

GUARANTEED TECHNICAL PARTICULARS

FOR

SF6 AND VACUUM CIRCUIT BREAKERS

GUARANTEED TECHNICAL PARTICULARS FOR CIRCUIT BREAKERS

For 420 KV,245 KV & 145 KV SF6 CB

- 1. (a) Makerøs name and country of manufacture
 - (b) Manufacturerøs type Designation
 - 1. Applicable technical standards
 - 2. (a) Rated voltage(kV)
 - (b) Rated frequency(Hz)
 - 4. Number of Poles
 - 5. Class
 - 6. Rated normal current
 - (a) Under site conditions(Amps)
 - (b) Rated (Amps)
 - 7. (a) Rated short circuit breaking current
 - (i) Rms value of AC component of rated short circuit current (KA)
 - (ii) Percentage DC component
 - (iii) Assymetrical Breaking Current at Highest System Voltage
 - (iv) Certificate or report no
 - (iii) Oscillogram no.
 - (b) Rated short circuit making current (KA peak)
 - (i) At Higher rated Voltage
 - (ii) At Lower rated Voltage
 - (c) (i) Maximum Breaking capacity Under Phase Opposition(KAP)
 - (iii) Max Pole discrepancy(ms)
 - (iv) Max arc duration & Corresponding current under lockout pressure
 - 8. First pole to clear factor
 - 9. Rated transient recovery voltage for terminal faults

(kV peak)

- 10. Rated characteristics for short line faults.
- 11. Rated operating sequence
- 12. Rated duration of short circuit(Sec.)
- 13. Rated out of phase making & breaking current (kA)
- 14. (a) Opening time (ms)
 - (i) Maximum Opening time under any condition
 - (ii) With limiting Voltage & Pressure.
 - (b) Arcing time (ms)
 - (i) At 100% rated breaking current (ms)
 - (ii) At 50% rated breaking current (ms)
 - (iii) At 25% rated breaking current (ms)
 - (iv) At 10% rated breaking current (ms)
 - (v) Maximum arcing time at lowest fault current (ms).
 - (c) Break Time (ms)
 - (i) At 100% rated breaking current (ms)
 - (ii) At 50% rated breaking current (ms)
 - (iii) At 25% rated breaking current (ms)
 - (iv) At 10% rated breaking current (ms)
 - (v) Maximum break time at lowest fault current (ms).
 - (v) Maximum Total Break Time under any duty condition For any current up to rated breaking current with limiting condition of Voltage & Pressure(ms)
 - (d) Closing time (ms)
 - (e) Minimum dead time for 3 phase reclosing
 - (f) Maximum Close Open Time under any condition

With limiting Voltage & Pressure.

- (g) Minimum Time Interval between each make/ Break Operation.
- 15. Rated line charging breaking current (kA)
- 16. Rated small inductive breaking current (kA)
- 17. (i)Max. rise of temperature over ambient for current rating under sl. 6.
 - (ii)Max. rise of temperature for

 Main contacts over design ambient temperature of 50deg C.
- 18. Interrupting capacity based on duty cycle as per sl. 11.
 - (a) AC ;component (kA)
 - (b) Percentage DC component.
- 19. Latching current (kA)
- 20. No. of breaks in series per pole.
- 21. Length of contact travel (mm)
- 22. Total length of break per pole (mm)
- 23. Rate of contact travel:
 - (a) At tripping (metres/sec.)
 - (b) At closing (metres/sec.)
- 24. Type of devices, if any, used to obtain uniform voltage distribution between breaks.

25.	Reco	overy voltage distribution between	
	break	ks in percent of rated voltage.	
	(a)	Single line to ground fault	
	(b)	Interruption on short lines.	
	(c)	Switching off an unloaded, transf	Former
26.	(i) Ty	'ype of main contact.	
27.	(iii)N (iv)C	Number of auxiliary contacts per pol Number of auxiliary contacts per pol Current rating of Auxiliary contacts e of arcing-contacts and/or arc	e for normal operation(NO & NC) e provided for Ownerøs use(NO & NC)
	• •	rol device	
28.	Mate	erial of contacts:	
	i. ii.	Main Arcing iii. Whether contacts are sil	ver plated
		iv. Thickness of silver coati	ng mm
	v	v. Contact pressure, kg/sq. mm.	
2	9. Insula	lation level of the breaker:	
		(a) 1 n voltage kV rms(Dry & Wet)	ninute power frequency withstand
		(i) Between live terminals & Gro(ii) Between terminals with Break	
		(b) Sw Voltage kV (peak)	itching surge withstand test
		- To earth	
		-	Across open contacts
	(c)	Lightning impulse withstand test voltage, kV(peak)	

- To earth
- Across open contacts
- (d) Max. dynamic power frequency over voltage withstand kV (peak)
- 30. i) RIV level (Max)
 - ii) Corona inception voltage (kV rms)
 - iii) Corona extinction voltage (kV rms)
- 31. Minimum clearances
 - (a) Between phases (live parts)(mm)
 - (b) Between live parts and earth (mm)
 - (c) Total Creepage Distance (i) To ground
 - (ii) Between Terminals
- 32. Whether the circuit breaker is fixed trip or trip free
- 33. Method of closing
 - (a) Normal
 - (b) Emergency
- 34. Type of closing mechanism
- 35. (a) Normal voltage of closing
 - (b) Pick up range (volts DC)
 - 36. (a) Power at normal voltage of closing mechanism (watts)
 - (b) Power at 85% of normal voltage of closing mechanism(watts)
 - (c) No of closing coils in operation
- 37. Type of tripping mechanism

Number of Tripping Coil

38. (A) Normal voltage of tripping coils(volts)

- (a) Power at normal voltage for Tripping coils (watts)
- (b) Power at 70% normal voltage for Tripping coils (watts).
- (c) No. of tripping coils in operation
- (d) Pick up range (V DC)
- (B) Number of close open operation
 - (i) possible after failure of AC supply to motor
- (ii) Time required for motor to charge the closing spring(Sec)
- (iii) Wheather indication of spring charged condition will be provided in control cabinet.
- 39. Arc duration at 100% (ms)
- 40. Interruption capacity:
 - a) Opening

Arcing time no. of loops and time including resistor current duration (cycle)

Resistor current duration (cycle)

Total length of the arc (mm)

Max. length of the arc (mm)

Total interrupting time measured from instant of trip coil energisation to arc extinction of resistor current (cycles)

- b) Closing time measured from instant of application of power to closing device upto arcing contacts touchings (cycles)
- 41. Critical current (current giving the longest arc

when a break takes place) (kA)

- a) Recovery voltage when circuit breaker tested at 100% rated breaking capacity (kV inst.)
- b) Rate of rise of restriking voltage at breaking
 - i) for 30% breaking capacity (kV/microsecs.)
 - ii) for 100% breaking capacity (kV/microsecs.)
 - c) Maximum over-voltage factor of the circuit breaker when switching off.
 - i) Unloaded transformers
 - ii) Loaded transformer
 - iii)Open circuited lines
 - 42. When switching of synchronous systems:
 - (a) Max. current (kA)
 - (b) Max. contacts of 1 pole (kV)
 - 43. No. of openings the circuit breaker is capable of performing without inspection, replacement of contacts or other main parts.
- (a) at 50% rated current
- (b) at 100% rated current
 - (c) at current corresponding to 50% rated breaking capacity.
 - (d) at current corresponding to 100% rated breaking capacity.
- 44. (A)a) W eight of complete circuit breaker (Kg).
 - b) Impact loading for foundation design, to include deed load plus impact value on opening at

maximum interrupting ratings, in terms of equivalent static load (Kg.)

- c) Overall dimensions:
 - Height (mm)

Width (mm)

Length (mm)

- (B)- Type & Material of Gasket used to ensure gas tight joints for
 - (i)Metal to Metal Joint
 - (ii) Metal to Porcelain Joints
 - (C) Type & Make of
 - a) Density Monitor

b)Pressure Gauge

- (D) Density Monitor Setting
- a) Lock Out
- b) Alarm
- 45. Porcelain:
 - a) Make
 - b) Type
 - c) Descriptive pamphlet no.
 - d) Weight (kg.)
 - e) Transport dimensions (mm)
 - f) Height above floor, required to remove porcelain (mm).
 - g) Insulation class
 - h) One minute power frequency withstand, kV (rms) (dry & wet)
 - i) Flash over voltage (kV)
 - j) Lightning impulse withstand voltage kV (peak) (dry & wet)
 - k) Switching surge withstand voltage kV (peak) (wet)
 - 1) Corona discharge voltage (kV rms)
 - m) Creepage distance, total protected (mm)
 - n) Permissible safe cantilever loading on installed porcelain (Kg.m)

- 46. (i)Rated pressure of SF6 gas in the circuit breaker (Kg/sq.cm)
- (ii) Rated Pressure of SF6 in operating Chamber(kg/cm2) at 20deg C
 - (iii) Limits of Pressure of extinguishing medium
- 47. Rated pressure of SF6 gas in the gas cylinders (Kg/sq.cm)
- 48. (i)Quantity of SF6 gas required per single pole unit (Kg.) at rated Pressure & at 20 deg C
 - (ii) Guaranteed Maximum Leakage rate per Year.
- 49. Quantity of SF6 gas per cylinder (Kg.)

Standard to which SF6 Gas Complies.

- 50. (i) Weight of empty cylinder (Kg.)
- (ii) Whether Breakers are dispatched filled with SF6 Gas or filled at site.
- 51. Quantity of absorbent required per pole (Kg.)
- 52. Recommended interval for renewal of absorbent in case of outdoor circuit breakers operating in tropical conditions.
- 53. Chemical composition of absorbent
- 54. Quantity of absorbent covered in the scope of supply (including spare quantities)
- 55. Limits of gas pressure for pressure operation of circuit breaker ó (Kg/sq.cm)
- 56. Pressure and temperature at which the temperature compensated gas pressure switch will
- a. give alarm (Kg/sq.cm., deg. C)
- b. cut off (Kg/sq.cm. deg. C)
- 57. Name of SF6 supplier and country of origin.
- 58. Quantity of SF6 gas supplied for
- a. Actual use in breakers (Kg.)
- b. As spare (Kg.)
- 59. Chemical composition of gas:
- a. Qty. of air by weight (ppm)
- b. Qty. of H_20 by weight (ppm)
- c. Qty. of CF₄ by weight (ppm)
- d. Oty. of free acid by weight (ppm)
- e. Density
- f. Oil Content
- g. Resistivity

60. Motor For Circuit Breaker

- a) Manufacture and address
- b) Equipment driven by motor or not.
- c) Motor Type
- d) Country of Origin
- e) Type of Duty
- f) Type of Enclosure & Method of Cooling
- g) Applicable Standard to which motor confirms
- h) Type of mounting
- i) Direction of rotations as viewed from non driving end.
- j) Standard Continuous rating at 50deg C
 - k) Rated Voltage
 - 1) Rated Speed at rated Voltage & Frequency(rpm).
 - m) Full Load current at rated voltage & frequency.
 - n) Power Factor at rated load.
 - o) Rating of the Motor.
 - p) Time for fully charging the closing spring

61. Control Cabinet

- (a) Material of enclosure
- (b) Thickness of sheet steel
- (c) Painting for control cubicle
- (d) Paint shade
- (e) Degree of protection
- (f) Dimension
- (g) Material of gasket

SCHEDULE OF GUARANTEED TECHNICAL PARTICULARS FOR 36 KV CIRCUIT BREAKERS

1.	Name of Manufacturer.	
2.	Manufacturer type designation.	
3.	Rated Voltage KV	
4.	Maximum (continuous) service rated Voltage	- KV
5.	Normal current rating.	
a)	Under normal conditions	3.
b)	Under site conditions.	
6.	Short time current rating for seconds (rms)	
7.	Maximum temperature rise over ambient.	-°C
8.	Breaking capacity.	
a)	Symmetrical.	KVA
b)	Asymmetrical.	MVA
9. M	aking capacity.	KA
10. To	otal break time in ms.	
a) at 1	0% rated interrupting capacity -	MS
b) at ra	ated interrupting capacity -	MS
11.Arc	sing time	M.S.
12.	Make time	M.S.
13.	Minimum reclosing time at full rated -	M.S.
	Interrupting MVA from the instant of Trip coil er	nergisation.
14.	Minimum dead time for 3 phase reclosing	M.S.
15.	Whether restricting free.	Yes/No
16.	One minute dry power frequency Withstanding test voltage (KV rms)	
	Between line terminal and ground objects.	- KV rms.
	Between terminal with breaker contacts open.	
17.	1.2/50micros full wave impulse withstand test v	oltage for the two cases
	above.	

- i) Between line terminal & grounded objects. -KV(Peak)
- ii) Between terminal with breaker Contacts open. -

18. **Busing or Insulators:**

- i) Type of bushing.
- ii) Dry 1 minute power frequency KV rms withstand test voltage.
- iii) Dry flashover value. KV rms.
- iv) Wet flashover value. KV rms.
- V) 1.2/50 impulse withstand KV(Peak)
- vi) Creepage distance. mm
- vii) Puncture value of bushing. KV
- viii) Weight of bushing. Kg.
- 19. Minimum clearance in air.
- i) Between phases. mm
- ii) Live parts to earth. mm
- iii) Live parts to ground level mm
- iv) Between live parts & grounded object. mm
- 20. Number of poles of circuit breaker.
- 21. Number of breaks per phase.
- 22. Total length of break per phase.
- 23. Type of main contacts.
- 24. Type of Aux. Contacts.
- 25. Materials of auxiliary contacts.
- 26. Contacts silver plated or not.
- 27. Thickness of silver plating.
- 28. Contact pressure.
- 29. Voltage distribution between breaker.
- 30. Type of device if any, used to limit

the rate of rise or restricting voltage.

31. Voltage grading device if any used. 32. Number of auxiliary contacts provided. i) Those closed when breaker is closed. ii) These open when breaker is closed. iii) Those adjustable with respect to the position of main contacts. 33. Type of operating mechanism. i) Opening ii) Closing. 34. Control circuit voltage. Power required for trip coil 35. Watts at 220V D.C. 36. Power required for close coil At 220V D.C. Watts 37. Frequency at which contacts are To be replaced. Nos. of terminal connector. 38. 39. Steel support structure galvanized Whether

With foundation. Nuts & Bolts to be provided yes or no

Yes/No

Kg.

Nos.

Type test certificate Furnished

Circuit Breaker weight.

Quantity.

40. 41.

42.

SI. No. Description

1. Code Word

- Maker and address and Country.
 - a) Aluminum rods
 - b) Steel Wire/rods
 - c) Complete conductor
- 3. Stranding and wire diameter
 - a) Aluminum.
 - b) Steel.
- 4. Standard nominal copper area in sq. mm
- Calculated equivalent aluminum area in sq. mm
- Actual aluminum area in sq. mm.
- Standard area of cross section in sq. mm.
 - a) Aluminum strand
 - b) Steel strand
 - c) Conductor
- 8. Diameter of complete conductor in mm.
- Minimum ultimate tensile stress of strand, in Kg/sq. mm.
 Before stranding and after stranding for
 - a) Aluminum strand.
 - b) Steel strand
- Guaranteed ultimate tensile strength of conductor in Kg.
- Minimum breaking load in Kg. Before stranding and after stranding for
 - a) Aluminum strand.
 - b) Steel strand.

- 12. Purity of aluminum rods.
- 13. Zinc coating of steel strand.
 - a) Uniformity of coating number and/duration of dips.
 - b) Minimum weight of coating gm/sq. mm.
- 14. Weight in Kg. per K.M.
 - a) Aluminum.
 - b) Steel.
 - c) Conductor.
- 15. Resistance in ohms per Km. at 20° c.
- 16. Continuous maximum current rating of conductor in still air at 45° C ambient temperature, considering temp. rise of 50°C.
- 17. Modulus of elasticity of :

Conductor.

- Co-efficient of linear expansion per degree centigrade of.
 - a) Aluminum strand.
 - b) Steel Strand.
 - c) Conductor.
- Percentage of carbon in steel wire.
- 20. Standard length of each peace in Km.
- 21. Initial and final sags and tension and stringing charts, whether furnished.
- 22. Tolerance, if any on standard length.
- 23. Number of standard length in one reel.

- 24. Dimensions of the reel in cms.
- 25. Weight of the Conductor in one reel in Kg.
- 26. Weight of the reel in Kg.
- Gross weight of the reel including weight of the conductor.
- 28. Whether the conductor will be manufactured as per the relevant Indian Standard Specification
 - & as per Section-IV
 # echnical specification of this specification.
- 29. Whether the conductor will be Tested as per the relevant Indian Standard Specification
 - & as per Section-IV \pm echnical specificationqof this specification.

(Cause-12 of Section . IV of Technical Specification)

29. Other particulars, if any.

- c) Contacts
- d) Terminal Connector
- 11. Max. temp rise of current carrying parts when carrying rated current continuously. (deg. C)
- 12. factor for specified site conditions.
- 13. De-rating Insulation levels.
 - i) Impulse withstand voltage (kV peak)
- a) Phase to Earth
- b) Across isolating Distance
- ii) Switching surge withstand voltage (kV peak)

- (a) Phase to Earth
- (b) Across isolating Distance
- iii) Power frequency withstand voltage (kV rms)
- (a) Phase to Earth
- (b) Across isolating distance
- iv) Radio interference voltage at 1.1 times maximum line to ground voltage (micro volts)
- v) Corona inception voltage (kV rms)
- vi) Corona extinction voltage (KV rms)
- 14. Minimum clearance in air:
- i) Between poles (mm)
- ii) Between live parts and earth (mm)
- iii) Between live part when switch is open
- (a) On the same pole (mm)
- (b) Between adjacent poles (mm)
- 15. Rated mechanical terminal load
- a) Load along the terminal connector side (kg)
 - ii) Load across the terminal connector side(kg)
- 16. Torque required to operate the switch in Kg. m.
- 14. Contact zone
- (i) Horizontal deflection (mm)
- (ii) Vertical deflection (mm)
- (iii) Total amplitude of longitudinal movement w.r.t. conductor supporting fixing contact (mm)
- 15. Design and Construction
- i) No. of Insulators per pole
- ii) Contacts
- a) Material and grade
- b) Cross-sectional area in sq.mm
- i) Moving Blades
- a) Material and grade
- b) Cross sectional area

- ii) Contact Support
- a) Material and size of channel / block
- b) Material and size of plate
- iii) Rain hood Material grade and size
- iv) Turn and twist mechanism
- a) Material and size of clamps
- b) Material and size of springs
- c) Whether springs are encased
- v) Nuts and Bolts.
- a) Size, material and grade in live parts.
 - b) Size material and grade in other parts
- viii) Insulator base plate

Material and size of plate below insulators

- ix) Bearings.
- a) Material and size of housing
- b) No. of bearings, location and size
- x) Tandem pipe
- a) Size class and no. of pipes
- b) Size of shackle, screw
- c) No. of bearings / bush and its material and size
- xi) Type of inter lock
- xii) Down pipe size and class
- xiii) Type of universal / swivel joint
- a) Between bearing and down pipe
- b) Between down pipe and operating mechanism
 - xiv) Operating mechanism
- a) Control cabinet

Material and thickness

Degree of protection

Type size and no. of cable glands

Whether removable gland plate provided.

b) Make type, rating and qty. of motors per isolator

Gears

Limit switches

Contactors

Over load relay

Single phase preventor

Auxiliary switch

Terminal blocks

Insulator wires

HRC fuses

Pole discrepancy relay

Timer

Space Heater

Interlocks

FOR

SURGE ARRESTORS

C1	Description	1	1		20 1717
Sl No.	Description	390 KV	216 KV	<u>120 KV</u>	<u>30 KV</u>
1	Bidderøs Name and Address.				
2	Manufacturerøs Name.				
3	Manufacturerøs type designation.				
4	Applicable standards.				
5	Arrester class and type.				
6	Rated Arrester Voltage (KV rms).				
7	Maximum continuous operating				
	voltages (MCOV) at design ambient				
	temperature (KV-rms).				
8	Nominal discharge current (8/20				
	micro second wave) (KA).				
9	Minimum discharge capability				
	referred to rated voltage at minimum				
	of discharge characteristics (KJ/KV).				
10	Line discharge class as per IEC.				
11	Maximum switching surge residual				
	voltage at 1 KA (KVP) for				
	390KV,216KV, 120KV and for				
	30KV at 500A.				
12	Maximum switching surge residual				
10	voltage at 1 KA for 216 KV.				
13	Maximum residual voltage for 8/20				
	micro-second current wave.				
	(a) At 50 % nominal discharge				
	current.				
	(b) At 100 % nominal discharge current.				
	(c) At 200 % nominal discharge				
	1				
14	current. Maximum residual voltage with 1				
14	micro-second current wave at 10				
	KAP (KVP).				
15	One minute power frequency (dry) &				
13	(wet) withstand voltage of arrester				
	(KV-rms).				
16	Impulse withstand test voltage of				
	arrester housing with 1.2/50 micro-				
	second wave (KVP).				
17	High current short duration (4/10				
- '	micro-second impulse wave) (KAP).				
18	Low current long duration (KAP).				
19	Reference voltage and corresponding				
		1	1	1	1

	reference current of arrester		
	(KV)(mA).		
20	Maximum internal leakage current by		
	its rms or peak value and both		
	resistive and capacitive component		
	separately at		
	(a) COV (resistive/capacitive) (mA).		
	(b) 1.1 COV (resistive/capacitive)		
	(mA).		
	(c) COV at 150°C		
	(resistive/capacitive) (mA).		
	(d) Reference voltage		
	(resistive/capacitive)(mA).		
21	Pressure relief class.		
22	Are the protection levels affected by		
22	pollution of external insulation.		
23	Energy absorption capability per		
23	operation of the arrester, during a		
24	switching surge discharge (KJ).		
24	Maximum amount of energy that may		
	be despatched into the arrester during		
	discharge assuming that discharge		
	takes place within 1 minute period		
	and state the switching surge current		
	(KJ/KA).		
25	Internal pressure required to operate		
	pressure relief device as a percentage of		
26	burst pressure of porcelain (KJ) & %.		
26	Dynamic over-voltage withstand		
	capability (KV-rms).		
	(a) For 0.1 Second.		
	(b) For 1 Second.		
	(c) For 10 Seconds.		
	(d) For 100 Seconds.		
27	Minimum prospective symmetrical		
	fault current (KA).		
28	Rejection rate of ZnO blocks during		
	manufacturing and operation for the		
	past three years (%) separately.		
	(a) 2004-2005.		
	(b) 2005-2006.		
	(c) 2006-2007.		
29	ZnO DISC DATA.		
2)	(a) Rated voltage of ZnO disc. (KV-		
	, ,		
	rms).		

	(b) No. of ZnO discs in a unit (Nos.)		
	(c) No. of units of arrester (Nos.)		
	(d) Height/thickness of ZnO discs		
	(mm).		
	(e) Diameter of ZnO disc (mm).		
30	EXTERNAL INSULATION.		
	(a) Type.		
	(b) Applicable standard.		
	(c)(i) Lightning Impulse withstand		
	test voltage of housing with 1.2/50		
	micro sec. Wave (KVP).		
	(ii) Wet switching impulse test		
	voltage (KVP)		
	(d) One minute power frequency		
	withstand voltage of arrester housing		
	KV rms.		
	[i] Dry.		
	[ii] Wet.		
	(e) Total creepage distance of arrester		
	housing (mm).		
	(f) Cantilever strength of complete		
	arrester (Kg-m).		
31	OVER ALL DIMENSIONS.		
	(a) Overall Height (mm).		
	(b) Height upto top of terminal pad		
	from mounting plane (mm).		
	(c) Material of terminal pad.		
	(d) Size of terminal pad (mm).		
	(e) Mounting dimensions and		
	diameter of mounting holes (mm).		
	(f) Diameter of insulator (mm).		
	(g) Total weight of complete arrester		
	(Kg.)		
32	TERMINAL CONNECTOR.		
	(a) Manufacturerøs Name.		
	(b) Applicable standards.		
	(c) Type.		
	(d) Material of connector.		
	[i] Clamp body.		
	[ii] Bolts and Nuts.		
	[iii] Spring washers.		
	(e) Rated current (Amps.)		
	(f) Rated terminal load (kg.)		
	(g) Factor of safety.		
	(h) Minimum thickness of any part		

	(mm).		
	(i) Weight of clamp complete with hard ware (kg.)		
	(j) Type test report as per IS enclosed.		
	(k) OGA Drawing enclosed.		
33	INSULATORS.		
	(a) Manufacturers Name.		
	(b) Type.		
	(c) Applicable standards.		
	(d) Height (mm).		
	(e) Diameter (top)(mm).		
	(f) Diameter (bottom) (mm).		
	(g) Total creepage distance (mm).		
	(h) Rated voltage (KV ó rms).		
	(i) Power frequency withstand voltage for 1		
	min. dry and wet (KV ó rms).		
	(j) 1.2/50 micro - second impulse withstand		
	voltage (KVP)		
	(k) Corona Extinction voltage (KV-rms)		
	(l) Weight (kg.)		
	(m) Maximum allowable span (mm).		
	(n) Cantilever strength (Kg ó m).

GUARANTEED TECHNICAL PARTICULARS

FOR

TRANSMISSION LINE : 400/220/132 KV

GUARANTED TECHNICAL PARTICULARS TO BE FIILED BY THE BIDDERS SCHEDULE : B

Manufacturers And Place Of Manufacture, Testing And Inspection (To be filled up by Bidder)

Item	Manufacturer	Place of manufacture	Place of testing and inspection
Line conductors (ACSR):	SUPPLIED	BY THE	EMPLOYER
Earthwire (galvanised steel) :			
Steel billets			
Drawing steel wires			
Stranding complete conductors			
Insulator units			
HV testing laboratory	-	-	
Insulator set fittings			
Earthwire fittings			
Conductor joints			
Conductor spacers/spacer dampers			
Vibration dampers (for earthwires and conductors)			
Steel towers :			
Design			
Steel billets, etc.			
Steel sections			
Fabrication			
Galvanising			
Check assembly			
Tower tests	-	-	
Bolts and nuts			
Tower fittings			
Earthing materials			

SCHEDULE: C

General Technical Particulars And Guarantees (Parameters considered and guaranteed by the Bidder for the purpose of this Contract. The data filled in shall form the part of the Contract, in case of Award and shall be binding on the Contractor)

C. 1 - Span Lengths (To be filled up by the Bidder)

	Unit	132kV	220kV	400kV
Normal span	m			
Tower design spans:				
Wind spans:				
Suspension towers	m			
Tension towers	m			
Maximum weight spans:				
Suspension towers	m			
Tension towers	m			
Minimum weight spans:				
Suspension towers	m			
Tension towers (uplift net)	m			

C . 2 - Line Conductor : 132 kV Construction (To be filled up by the Bidder)

	Unit	
Complete line conductor:		
Actual area (total) per single conductor	mm ²	
Number of conductors per phase		
Horizontal distance between conductor centres of one phase	mm	
Each single conductor:		
ACSR conductor of code name		
IEC STANDARD No		

INDIAN STANDARD No		
Material of conductor		
Number and diameter of wires:		
Aluminium	No./mm	
Total area of conductor	mm ²	
Overall diameter of stranded conductor	mm	
Mass of conductor per kilometre	kg	
Ultimate strength of conductor	Newton	
Maximum tension of conductor at 5°C and 36% full wind pressure	Newton	
Maximum tension of conductor at 32°C with full wind pressure	Newton	
Maximum tension of conductor in still air at minimum temperature of 5°C	Newton	
Assumed equivalent modulus of elasticity of conductor	N/mm²	
Assumed equivalent coefficient of linear expansion of conductor	per °C	

C . 2 - Line Conductor : 132 kV Construction (Continued) (To be filled up by the Bidder)

	Unit	
Vibration damping system:		
*Maximum span for:		
One vibration damper at each end of span	m	
Two vibration dampers at each end of span	m	
Three vibration dampers at each end of span	m	
Dimensions from clamp mouth to vibration damper attachment:		

First damper	mm	
Second damper when required	mm	
Third damper when required	mm	

^{*} Delete as appropriate and fill in details for selected damping system

(After placement of order, the Contractor has to carry-out vibration analysis and furnish a detailed vibration damper placement chart, as has been specified at Clause No. 2.3.14, for the approval of the Project Manager.)

C . 3 - Line Conductor : 220 kV Construction (To be filled up by the Bidder)

	Unit	
Complete line conductor:		
Actual area (total) per single conductor	mm ²	
Number of conductors per phase		
Horizontal distance between conductor centres of one phase	mm	
Each single conductor:		
ACSR conductor of code name		
IEC STANDARD No		
INDIAN STANDARD No		
Material of conductor		
Number and diameter of wires:		
Aluminium	No./mm	
Total area of conductor	mm ²	
Overall diameter of stranded conductor	mm	
Mass of conductor per kilometre	kg	
Ultimate strength of conductor	Newton	
Maximum tension of conductor at 5°C and 36% full wind	Newton	
Maximum tension of conductor at 32°C with full wind	Newton	
Maximum tension of conductor in still air at minimum temperature of 5°C	Newton	
Assumed equivalent modulus of elasticity of conductor	N/mm ²	
Assumed equivalent coefficient of linear expansion of conductor	per °C	

C.3 - Line Conductor: 220 kV Construction (Continued) (To be filled up by the Bidder)

	Unit	
Vibration damping system:		
*Maximum span for:		
One vibration damper at each end of span	m	
Two vibration dampers at each end of span	m	
Three vibration dampers at each end of span	m	
Dimensions from clamp mouth to vibration damper attachment:		
First damper	mm	
Second damper when required	mm	
Third damper when required	mm	

^{*} Delete as appropriate and fill in details for selected damping system

(After placement of order, the Contractor has to carry-out vibration analysis and furnish a detailed vibration damper placement chart, as has been specified at Clause No. 2.3.14, for the approval of the Project Manager.)

C.4 - Line Conductor: 400 kV Construction (To be filled up by the Bidder)

(10 be fined up by the	c Bladel j	
	Unit	_
Complete line conductor:		
Actual area (total) per single conductor	mm^2	
Number of conductors per phase		
Horizontal distance between conductor centres of one	mm	
phase		
Each single conductor:		
ACSR conductor of code name		
IEC STANDARD No		
INDIAN STANDARD N		
INDIAN STANDARD No		
Material of an advator		
Material of conductor		

Number and diameter of wires: Aluminium.	No./mm	
Total area of conductor	mm ²	
Overall diameter of stranded conductor	mm	
Mass of conductor per kilometre	kg	
Ultimate strength of conductor	Newton	
Maximum tension of conductor at 5°C and 36% full wind	Newton	
Maximum tension of conductor at 32°C with full wind	Newton	
Maximum tension of conductor in still air at minimum temperature of 5°C	Newton	
Assumed equivalent modulus of elasticity of conductor	N/mm ²	
Assumed equivalent coefficient of linear expansion of conductor	per °C	

C . 4 - Line Conductor : 400 kV Construction (Continued) (To be filled up by the Bidder)

	Unit	
Vibration damping system and Spacing system:		
*Maximum span for:		
One vibration damper at each end of span	m	
Two vibration dampers at each end of span	m	
Three vibration dampers at each end of span	m	
Dimensions from clamp mouth to vibration damper attachment:		
First damper	mm	
Second damper when required	mm	
Third damper when required	mm	

Mean sub span for spacers	m	
If spacer dampers are to be offered:		
Mean sub span for spacer dampers	m	

^{*} Delete as appropriate and fill in details for selected damping system

(After placement of order, the Contractor has to carry-out vibration analysis and furnish a detailed vibration damper placement chart, as has been specified at Clause No. 2.3.14, for the approval of the Project Manager. Also ,for spacer and spacer damper the Contractor shall furnish placement chart, for the approval of the Project Manger, as per the Clause No. 2.4.3.2 and 2.5.20 respectively.)

C.5 - Earth Wire: 132 kV and 220 kV Constructions (To be filled up by the Bidder)

	Unit	GSW
Complete earth conductor:		
Appropriate Indian Standard No.		
Appropriate Indian Standard No		
Appropriate IEC Standard No		
Material of conductor		
Number and diameter of wires	No./mm	
Overall diameter of conductor	mm	
Mass of conductor per kilometre	kg	
·		
Ultimate strength of conductor	Newton	
Lay length	mm	
Direction of the lay of the outer layer		
Chemical composition of the steel wire		
Carbon	%	
Manganese	,,	
Phosphorous		
Sulphur		
Silicon		
Purity of Zinc for galvanising		

Steel strands after galvanising Diameter Minimum breaking load of one strand Galvanising	%	
a) Minimum weight of Zinc coating per sq.m. of the uncoated wire surface after galvanising	mm	
	kN	
	gms	

C . 5 - Earth Wire : 132 kV and 220 kV Constructions (Continued) (To be filled up by the Bidder)

	Unit	GSW
b) Minimum no. of one minute dips that the galvanised strand can withstand after stranding in Standard Preece Test	Nos.	
Maximum tension at 5°C and 36% full wind	Newton	
Maximum tension at 32°C with full wind	Newton	
Maximum tension of conductor in still air at 5°C	Newton	
Assumed equivalent modulus of elasticity of Conductor	hbar	
Assumed equivalent coefficient of linear expansion of conductor	per °C	
Maximum length of conductor on drum #	km	
D.C. resistance at 20 °C	ohms/km	
Maximum span for:		
One vibration damper at each end of span	m	
Two vibration dampers at each end of span	m	
Three vibration dampers at each end of span	m	
Dimensions from clamp mouth to vibration damper attachment		
First damper	mm	
Second damper when required	mm	

Third damper when required	mm	

[#] It is permitted to supply two lengths of 2 kms each, in a single drum.

(After placement of order, the Contractor has to carry-out vibration analysis and furnish a detailed vibration damper placement chart, as has been specified at Clause No. 3.3, for the approval of the Project Manager.)

C.6 - Earth Wire: 400 kV Construction (To be filled up by the Bidder)

	Unit	GSW
Complete earth conductor:		
Appropriate Indian Standard No		
Appropriate IEC Standard No		
Material of conductor		
Number and diameter of wires	No./mm	
Overall diameter of conductor	mm	
Mass of conductor per kilometre	kg	
Ultimate strength of conductor	Newton	
Lay length	mm	
Chemical composition of the steel wire	%	
Carbon		
Manganese		
Phosphorous		
Sulphur		
Silicon		
Purity of Zinc for galvanising	%	
Steel strands after galvanising		
Diameter	mm	
Minimum breaking load of one strand	kN	
Galvanising		

a) Minimum weight of Zinc coating per sq.m. of the uncoated wire surface after galvanising	gms	
b) Minimum no. of one minute dips that the galvanised strand can withstand, after stranding in Standard Preece Test.		

C.6 - Earth Wire: 400 kV Construction (Continued) (To be filled up by the Bidder)

	Unit	GSW
Maximum tension at 5°C and 36% full wind pressure	Newton	
Maximum tension at 32°C with full wind pressure	Newton	
Maximum tension of conductor in still air at 5°C	Newton	
Assumed equivalent modulus of elasticity of Conductor	hbar	
Assumed equivalent coefficient of linear expansion of conductor	°C	
Maximum length of conductor on drum #	km	
D.C. resistance of the complete earthwire at 20°C	ohms/km.	
Direction of lay of the outer layer		
Maximum span for: One vibration damper at each end of span Two vibration dampers at each end of span Three vibration dampers at each end of span Dimensions from clamp mouth to vibration damper attachment	m m m	
First damper	mm	
Second damper when required	mm	
Third damper when required	mm	

[#] It is permitted to supply two lengths of 2kms each, in a single drum.

(After placement of order, the Contractor has to carry-out vibration analysis and furnish a detailed vibration damper placement chart, as has been specified at Clause No. 3.3, for the approval of the Project Manager.)

C.7 - Earthwire Fittings and Accessories (To be filled up by the Bidder)

	Unit	GSW:7/3.15	GSW:7/3.66
Suspension Clamps			
Total drop	mm		
Weight of the assembly	kg		
Breaking load	kN		
Slipping strength	kN		
Tightening torque	kN		
Galvanising			
a) Minimum weight of Zinc coating per Sq.m. of uncoated surface	gms. /sq. m		
b) No. of one minute dips all the galvanised parts can withstand in Standard Preece test			
c) Purity of Zinc used for galvanising	%		
Tension Clamps			
Total weight of the assembly	kg		
Weight of the steel parts	kg		
Weight of the Aluminium encasing	kg		
Slipping strength of the clamp	kN		
Minimum breaking load of the assembly	kN		
Compression pressure	Tonn e		
a) Steel sleeve			
b) Aluminium encasing			
Inside diameter (Before compression) a) Steel sleeve b) Aluminium encasing	mm		

C.7 - Earthwire Fittings and Accessories (continued) (To be filled up by the Bidder)

	Unit	GSW:7/3.15	GSW:7/3.66
Outside dimension of the steel sleeve	mm		
a) Before compression			
b) After compression			
i) Corner to corner			
ii) Surface to surface			
Outside diameter of the Aluminium encasing (Before compression)	mm		
Outside dimension of the clamp after compression of the Aluminium encasing	mm		
Length of the steel sleeve	mm		
a) Before compression			
b) After compression			
Final dimension of the clamp after compression with Aluminium encasing	mm		
Brinnel hardness no. of the steel sleeve (range)			
Resistance of the completed tension clamp	ohm		
Galvanising:	S		
a) Minimum weight of Zinc coating per Sq.m. of uncoated surface	gms. /sq. m		
b) No. of one minute dips all the galvanised parts can withstand in Standard Preece test			
c) purity of Zinc used for galvanising	%		
Mid-span compression joints for earthwire			
Total weight of the joints	kg		
Weight of the steel sleeve	kg		
Weight of the aluminium sleeve	kg		

C.7 - Earthwire Fittings and Accessories (continued) (To be filled up by the Bidder)

	Unit	GSW:7/3.15	GSW:7/3.66
Inside diameter before compression	mm		
a) Steel sleeve			
b) Aluminium encasing			
Outside diameter before compression	mm		
a) Steel sleeve			
b) Aluminium encasing			
Outside dimensions of the joint after compression	mm		
a) Steel sleeve			
i) Corner to corner			
ii) Surface to surface			
b) With aluminium encasing			
Length of the steel sleeve	mm		
a) Before compression			
b) After compression Final length of the joint after compression with aluminium encasing	mm		
Compression pressure	Tonn		
Slipping strength	e kN		
Resistance of the completed joint	ohm s		
Galvanising : a) Minimum weight of Zinc coating per	ame		
Sq.m. of uncoated surface	gms. /sq. m		
b) No. of one minute dips all the galvanised parts can withstand in Standard Preece test			
c) Purity of Zinc for galvanizing	%		
Flexible copper bonds			
Resistance of the Cu-bond	ohm s		
Total weight of the Cu-bonds	kg		
Slipping strength	kN		

C.8 - Conductor(ACSR) Fittings and Accessories (To be filled up by the Bidder)

	Unit	PANTHER	ZEBRA	MOOSE
Mid-span compression joints for Conductors				
Weight of the joints	kgs			
Slipping strength	kN			
Resistance of the completed joints	ohms			
Material of the joints (specify alloy type and its aluminium contents)				
Before compression dia. of sleeve	mm			
a) Inner diameter				
b) Outer diameter				
Dimensions after compression	mm			
a) Corner to corner				
b) Surface to surface				
Length of the sleeve	mm			
a) Before compression				
b) After compression				
Compression pressure	Tonne			
Whether designed for intermittent or continuous compression				
Minimum corona extinction voltage under dry conditions	kV			
Radio interference voltage under conditions	Micro Volts			

C.8 - Conductor(ACSR) Fittings and Accessories (continued) (To be filled up by the Bidder)

	Unit	PANTHER	ZEBRA	MOOSE
Repair sleeve for conductors				
Weight of the sleeve	kgs			
Before compression dia. of sleeve	mm			
a) Inner diameter				
b) Outer diameter				
Dimensions after compression	mm			
a) Corner to corner				
b) Surface to surface				
Length of the sleeve	mm			
a) Before compression				
b) After compression				
Compression pressure	Tonne			
Minimum corona extinction voltage under dry conditions	kV			
Radio interference voltage under conditions	Micro Volts			
T-connector (only for ACSR MOOSE)				
Weight of the T-connector	kgs			
Axial tensile strength of the welded portion of the T-connector	kN			
Breaking strength of the T-connector	kN			
Resistance of the completed T-connection	ohms			

C.8 - Conductor(ACSR) Fittings and Accessories (continued) (To be filled up by the Bidder)

	Unit	PANTHER	ZEBRA	MOOSE
Before compression dia. of the T-connector	mm			

a) Inner diameter			
b) Outer diameter			
Dimensions after compression	mm		
a) Corner to corner			
b) Surface to surface			
Length of the T-connector	mm		
a) Before compression			
b) After compression			
Compression pressure	Tonne		
Minimum corona extinction voltage under dry conditions	kV		
Radio interference voltage under conditions	Micro Volts		

C . 9 - Vibration Damper For Conductor and Earthwire (To be completed by the Bidder)

Vibration Dampers for ACSR PANTHER	Unit		
Total weight of the damper	kgs		
		Left	Right
Weight of each damper mass	kgs		_
Resonance frequencies			
1) First frequency	Hz		
2) Second frequency	Hz		
Dimension of each damper mass	mm		
Material of :			
1) Damper mass			
2) Messenger cable			
No. of strands in messenger cable			
Lay ratio of the messenger cable strands			
Min. tensile strength of messenger cable	kg/sq.mm.		
Mass pull-off strength	kN		
Clamping torque	kgm		
Slipping strength of the damper clamp	kN		
1) Before fatigue test			
2) After fatigue test			
Magnetic power loss per vibration damper	Watts		
Min. corona extinction voltage under dry conditions	kV		
Radio interference voltage under dry conditions at 1MHz, at 105 kV	Micro Volts		
Percentage variation in reactance after fatigue test in comparison with that before the fatigue test	%		
Percentage variation in power dissipation after fatigue test in comparison with that before the fatigue test	%		

$C\:.\:9\:$ - Vibration Damper For Conductor and Earthwire (Continued) (To be completed by the Bidder)

Vibration Dampers for ACSR PANTHER	Unit		
Galvanising of ferrous parts (if any)			
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m		
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.		
3) Purity of Zinc used for galvanizing	%		
Vibration Dampers for ACSR ZEBRA			
Total weight of the damper	kgs		
Weight of each damper mass	kgs	Left	Right
Resonance frequencies			
1) First frequency	Hz		
2) Second frequency	Hz		
Dimension of each damper mass	mm		
Material of :			
1) Damper mass			
2) Messenger cable			
No. of strands in messenger cable			
Lay ratio of the messenger cable strands			
Min. tensile strength of messenger cable	kg/sq.mm.		
Mass pull-off strength	kN		
Clamping torque	kgm		
Slipping strength of the damper clamp	kN		
1) Before fatigue test			
2) After fatigue test			

C.9 - Vibration Damper For Conductor and Earthwire (Continued) (To be completed by the Bidder)

Vibration Dampers for ACSR ZEBRA	Unit		
Magnetic power loss per vibration damper	Watts		
Min. corona extinction voltage under dry conditions	kV		
Radio interference voltage under dry conditions at 1MHz, at 154 kV	Micro Volts		
Percentage variation in reactance after fatigue test in comparison with that before the fatigue test	%		
Percentage variation in power dissipation after fatigue test in comparison with that before the fatigue test	%		
Galvanising of ferrous parts (if any)			
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m		
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.		
3) Purity of Zinc used for galvanizing	%		
Vibration Dampers for ACSR MOOSE			
Total weight of the damper	kgs		
		Left	Right
Weight of each damper mass	kgs		_
Resonance frequencies			
1) First frequency	Hz		
2) Second frequency	Hz		
Dimension of each damper mass	mm		
Material of : 1) Damper mass			
2) Messenger cable			

C.9 - Vibration Damper For Conductor and Earthwire (Continued)
(To be completed by the Bidder)

Vibration Dampers for ACSR MOOSE	Unit
No. of strands in messenger cable	
Lay ratio of the messenger cable strands	
Min. tensile strength of messenger cable	kg/sq.mm.
Mass pull-off strength	kN
Clamping torque	kgm
Slipping strength of the damper clamp	kN
1) Before fatigue test	
2) After fatigue test	
Magnetic power loss per vibration damper	Watts
Min. corona extinction voltage under dry conditions	kV
Radio interference voltage under dry conditions at 1MHz , at 305 kV	Micro Volts
Percentage variation in reactance after fatigue test in comparison with that before the fatigue test	%
Percentage variation in power dissipation after fatigue test in comparison with that before the fatigue test	%
Galvanising of ferrous parts (if any)	
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.
3) Purity of Zinc used for galvanizing	%

$C\:.\:9\:$ - Vibration Damper For Conductor and Earthwire (Continued) (To be completed by the Bidder)

Vibration Dampers for 7/3.15mm Earthwire	Unit		
Total weight of the damper	kgs		
		Left	Right

Weight of each damper mass	kgs
Resonance frequencies	
1) First frequency	Hz
2) Second frequency	Hz
Dimension of each damper mass	mm
Material of :	
1) Damper mass	
2) Messenger cable	
No. of strands in messenger cable	
Lay ratio of the messenger cable strands	
Min. tensile strength of messenger cable	kg/sq.mm.
Mass pull-off strength	kN
Clamping torque	kgm
Slipping strength of the damper clamp	kN
1) Before fatigue test	
2) After fatigue test	
Percentage variation in reactance after fatigue test in comparison with that before the fatigue test	%
Percentage variation in power dissipation after fatigue test in comparison with that before the fatigue test	%

C . 9 - Vibration Damper For Conductor and Earthwire (Continued) (To be completed by the Bidder)

Vibration Dampers for 7/3.15mm Earthwire	Unit
Galvanising of ferrous parts (if any)	
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.

3) Purity of Zinc used for galvanizing	%		
Vibration Dampers for 7/3.66mm Earthwire			
Total weight of the damper	kgs		
Weight of each damper mass	kgs	Left	Right
Resonance frequencies			
1) First frequency	Hz		
2) Second frequency	Hz		
Dimension of each damper mass	mm		
Material of :			
1) Damper mass			
2) Messenger cable			
No. of strands in messenger cable			
Lay ratio of the messenger cable strands			
Min. tensile strength of messenger cable	kg/sq.mm.		
Mass pull-off strength	kN		
Clamping torque	kgm		
Slipping strength of the damper clamp	kN		
1) Before fatigue test			
2) After fatigue test			

C . 9 - Vibration Damper For Conductor and Earthwire (Continued) (To be completed by the Bidder)

Vibration Dampers for 7/3.66mm Earthwire	Unit	
Percentage variation in reactance after fatigue test in comparison with that before the fatigue test	%	
Percentage variation in power dissipation after fatigue test in comparison with that before the	%	

fatigue test		
Galvanising of ferrous parts (if any)		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m	
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.	
3) Purity of Zinc used for galvanizing	%	

C.10 - Bundle Spacers For 400kV Line Conductors (To be filled up by the Bidder)

	Unit	
Material of component parts(indicate type of alloy)		
1) Insert		
2) Main body		
3) Retaining rods (if any)		
Manufacturing process for 1) Insert		
2) Main body		
3) Retaining rods (if any)		
Retaining rods (if used) 1) Type of alloy used		
2) No. of retaining rods used for each spacer		
3) Diameter of the rod	mm	
4) Length of the rod	mm	
5) Total weight of one set of the rods	kgs	
Elatomer 1) Supplier		
2) Type		
3) Moulded on the insert or not		
4) Shore hardness		
5) Thickness on the insert	mm	
6) Temperature for which designed	°C	
Minimum strength of the spacer 1) Compressive load	kN	

2) Tensile load	kN	
Weight of the spacer	kgs	
Designed clamping torque (if applicable)	kg-m	
Slipping strength of spacer clamp 1) Before vibration test	kN	
2) After vibration test	kN	

C.10 - Bundle Spacers For 400kV Line Conductors (Continued) (To be filled up by the Bidder)

	Unit	
Magnetic power loss per spacer	Watts	
Galvanising of ferrous parts (if any)		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m	
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.	
3) Purity of Zinc used for galvanising	%	
Min. corona extinction voltage under dry conditions	kV	
Radio interference voltage under dry conditions	Micro Volts	
Electrical resistance of the elastomer cushioned spacer (specify the range)	ohms	

C.11 - Bundle Spacers For Jumpers Of 400kV Lines (To be filled up by the Bidder)

(10 00 111104 41) 0	, ,	
	Unit	
Material of component parts (indicate type of alloy) 1) Insert		
2) Main body		
Manufacturing process for 1) Insert

1) Compressive load	kN	
2) Tensile load	kN	

C.12 - Spacer Dampers For 400kV Line Conductors (Continued) (To be filled up by the Bidder)

	Unit	
Weight of the spacer damper	kgs	
Designed clamping torque (if applicable)	kg-m	
Slipping strength of spacer damper clamp		
1) Before vibration test	kN	
2) After vibration test	kN	

Galvanising of ferrous parts (if any)		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m	
Minimum No. of one minute dips the ferrous parts can withstand in the Standard Preece Test	Nos.	
3) Purity of Zinc used for galvanising	%	
Min. corona extinction voltage under dry conditions	kV	
Radio interference voltage under dry conditions	Micro Volts	
Magnetic power loss per spacer damper	Watts	
Electrical resistance of the elastomer cushioned spacer damper (specify the range)	ohms	

C.13 - Disc Insulator Units (Standard Type) (To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Weight of the single disc unit	kg				
Size and designation of the ball pin shank	mm				
Diameter of the disc	mm				
Tolerance on the diameter	+/-mm				
Ball to ball spacing between disc	mm				
Tolerance on ball to ball spacing	+/-mm				
Minimum creepage distance of a single disc	mm				
Positive tolerance on the minimum creepage distance	+mm				
Shell material (Glass/Porcelain)					
Power frequency flashover voltage (rms) of single disc unit					
1) Dry	kV				

2) Wet	kV		
Power frequency withstand voltage (rms) of single disc unit			
Dry Wet Power frequency puncture voltage (rms) of single disc unit	kV kV kV		

C.13 - Disc Insulator Units (Standard Type) (Continued)
(To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Impulse flashover voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					
Impulse withstand voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					
Steepness of the impulse voltage which the disc unit can withstand in Steep Wave Front Test	kV per micro sec.				
Corona extinction voltage (rms) under dry condition, for single unit					
Maximum RIV at 1 MHz and at 10 kV (rms) for single unit	Micro Volts.				
Purity of Zinc used for galvanising	%				
No. of dips in Standard Preece Test 1) Cap socket					
2) Ball pin					
Axial and radial run-out (According to IEC)					
1) As per pointer A	mm				
2) As per pointer B	mm				

C.13A - Composite Insulator Units (Standard Type)

(To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Weight of the single insulator unit	kg				
Size and designation of the ball pin shank / clevis and tongue	mm				
Diameter of (along with tolerance)	mm				
central core without housing sleeve cover					
central core with housing sleeve cover					
3) weather shed					
Length of single insulator unit	mm				
Tolerance on unit insulator length	+/-mm				
Minimum creepage distance of a single insulator unit	mm				
Positive tolerance on the minimum creepage distance	+mm				
Core material					
Shed material					
Power frequency flashover voltage (rms) of single disc unit					
Dry Wet Power frequency withstand voltage (rms) of single disc unit	kV kV				
1) Dry 2) Wet	kV kV				

C.13A - Composite Insulator Units (Standard Type) (Continued) (To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Impulse flashover voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					

Impulse withstand voltage (peak) of single disc unit (dry)			
1) Positive			
2) Negative			
Steepness of the impulse voltage which the disc unit can withstand in Steep Wave Front Test	kV per micro sec.		
Corona extinction voltage (rms) under dry condition, for single unit			
Maximum RIV at 1 MHz and at 10 kV (rms) for single unit	Micro Volts.		
Purity of Zinc used for galvanising	%		
No. of dips in Standard Preece Test 1) Cap socket			
2) Ball pin			

Note: Any other parameters which Bidder feels are necessary to define the offered composite insulator unit, shall be indicated and guaranteed in the above format.

C.14 - Disc Insulator Units (Anti-fog Type) (To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Weight of the single disc unit	kg				
Size and designation of the ball pin shank	mm				
Diameter of the disc	mm				
Tolerance on the diameter	+/-mm				
Ball to ball spacing between disc	mm				
Tolerance on ball to ball spacing	+/-mm				
Minimum creepage distance of a single disc	mm				
Positive tolerance on the minimum creepage distance	+mm				
Shell material (Glass/Porcelain)					

Power frequency flashover voltage (rms) of single disc unit			
1) Dry	kV		
2) Wet	kV		
Power frequency withstand voltage (rms) of single disc unit			
1) Dry	kV		
2) Wet	kV		
Power frequency puncture voltage (rms) of single disc unit	kV		

C.14 - Disc Insulator Units (Anti-fog Type) (Continued) (To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Impulse flashover voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					
Impulse withstand voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					
Steepness of the impulse voltage which the disc unit can withstand in Steep Wave Front Test	kV per micro sec.				
Corona extinction voltage (rms) under dry condition, for single unit					
Maximum RIV at 1 MHz and at 10 kV (rms) for single unit	Micro Volts.				
Purity of Zinc used for galvanising	%				
Purity of Zinc used for sleeve	%				
No. of dips in Standard Preece Test 1) Cap socket					

2) Ball pin			
Axial and radial run-out (According to IEC)			
1) As per pointer A	mm		
2) As per pointer B	mm		

C.14A - Composite Insulator Units (Anti-fog Type) (To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Weight of the single insulator unit	kg				
Size and designation of the ball pin shank / clevis and tongue	mm				
Diameter of (along with tolerance)	mm				
central core without housing sleeve cover					
central core with housing sleeve cover					
3) weather shed					
Length of single insulator unit	mm				
Tolerance on unit insulator length	+/-mm				
Minimum creepage distance of a single insulator unit	mm				
Positive tolerance on the minimum creepage distance	+mm				
Core material					
Shed material					
Power frequency flashover voltage (rms) of single disc unit					
1) Dry	kV				
2) Wet	kV				
Power frequency withstand voltage (rms) of single disc unit					
1) Dry	kV				

C.14A - Composite Insulator Units (Anti-fog Type) (Continued) (To be filled up by the Bidder)

	Unit	70kN	90kN	120kN	160kN
Impulse flashover voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					
Impulse withstand voltage (peak) of single disc unit (dry)					
1) Positive					
2) Negative					
Steepness of the impulse voltage which the disc unit can withstand in Steep Wave Front Test	kV per micro sec.				
Corona extinction voltage (rms) under dry condition, for single unit					
Maximum RIV at 1 MHz and at 10 kV (rms) for single unit	Micro Volts.				
Purity of Zinc used for galvanising	%				
No. of dips in Standard Preece Test 1) Cap socket					
2) Ball pin					

Note: Any other parameters which Bidder feels are necessary to define the offered composite insulator unit, shall be indicated and guaranteed in the above format.

C.15 - Insulator Strings (Suspension Sets For 132 kV Lines) (To be filled up by the Bidder)

	Unit	Single "I" Suspension Strings	Double "I" Suspension Strings	Pilot Suspensio n Strings
Power frequency withstand voltage of the string with arcing horns and corona control rings / grading rings under wet conditions	kV(rms)			

		_	
	pulse flashover voltage (peak) der dry conditions		
	1) Positive	kV	
	2) Negative	kV	
	pulse withstand voltage (peak) der dry conditions		
	1) Positive	kV	
	2) Negative	kV	
(0	alt-fog pollution withstand voltage nly for strings with anti-fog disc iits)	kV(rms)	
	inimum corona extinction voltage oder dry conditions	kV(rms)	
	adio interference voltage under dry Inditions at 1MHz, at 105kV	Micro Volts	
in	echanical strength of the complete sulator string along with all ardware fittings	kN	
in vo	aximum voltage (in percentage) cross any disc in the complete sulator string under phase to earth oltage (not applicable for string with amposite insulator units)	%	
	umber of insulator units in each ing		

C . 15 - Insulator Strings (Suspension Sets For 132 kV Lines) $\,$ (Continued) $\,$ (To be filled up by the Bidder)

	Unit	Single "I" Suspension Strings	Double "I" Suspension Strings	Pilot Suspensio n Strings
Overall length of the set including clamp and all fittings (specify the tolerance also)	mm			
Weight of the set, complete with all fittings and arcing horns	kg			
Weight of the counter-weights	kg			

1	1		1	1
Minimum arcing gap distance	mm			
Maximum magnetic power loss of the suspension assembly	Watts			
Slipping strength of the suspension assembly (clamp torque Vs. slip curve shall be enclosed)	kN			
Particulars of Standard/AGS pre- formed armour rod set for suspension assembly		Standard Or, AGS	Standard Or, AGS	Standard Or, AGS
1) No. of rods per set	No.			
2) Direction of the lay				
Overall length after fitting on the conductor	mm			
Actual length of each rod along its helix	mm			
5) Diameter of each rod	mm			
6) Tolerance in				
a) Diameter of each rod	+/- mm			
b) Length of each rod	+/- mm			
c) Difference of length between the longest and shortest rod in a set	+/- mm			
7) Type of Aluminium alloy used for manufacture of PA rods				
8) UTS of each rod	kg/mm ²			

C . 15 - Insulator Strings (Suspension Sets For 132 kV Lines) $\,$ (Continued) $\,$ (To be filled up by the Bidder)

	Unit	Single "I" Suspensio n Strings	Double "I" Suspension Strings	Pilot Suspensio n Strings
Particular of Elastomer (for AGS clamps only)				
1) Supplier of elastomer				
2) Type of elastomer				

3) Shore hardness of elastomer	
Temperature range for which elastomer is designed	°C
5) Moulded on insert	yes/no
Purity of Zinc used for galvanising	%
Minimum No. of one minute dips the ferrous parts can withstand in Standard Preece Test	No.
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m

C . 16 - Insulator Strings (Tension Sets For 132 kV Lines) (To be filled up by the Bidder)

	Unit	Single Tension Strings	Double Tension Strings
Power frequency withstand voltage of the string with arcing horns and corona control rings / grading rings under wet conditions	kV(rms)		
Impulse flashover voltage (peak) under dry conditions			
1) Positive	kV		
2) Negative	kV		
Impulse withstand voltage (peak) under dry conditions			
1) Positive	kV		
2) Negative	kV		
Salt-fog pollution withstand voltage (only for strings with anti-fog units)	kV (rms)		
Minimum corona extinction voltage under dry conditions	kV(rms)		
Radio interference voltage under dry conditions at 1MHz, at 105kV	Micro Volts		
Mechanical strength of the complete insulator string along with all hardware fittings	kN		

Maximum voltage (in percentage) across any disc in the complete insulator string under phase to earth voltage (not applicable for string with composite insulator units)	%	
Number of insulator units in each string		
Overall length of the set including clamp and all fittings (specify the tolerance also)	mm	

C . 16 - Insulator Strings (Tension Sets For 132 kV Lines) $\,$ (Continued) $\,$ (To be filled up by the Bidder)

	Unit	Single Tension Strings	Double Tension Strings
Weight of the set, complete with all fittings and arcing horns	kg		
Minimum arcing gap distance	mm		
Electrical resistance of the complete tension assembly along with jumper connection	ohms		
Slipping strength of the tension assembly	kN		
Purity of Zinc used for galvanising	%		
Minimum No. of one minute dips the ferrous parts can withstand in Standard Preece Test	No.		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m		

C . 17 - Insulator Strings (Suspension Sets For 220 kV Lines) (To be filled up by the Bidder)

	Unit	Single "I" Suspensi on Strings	Double "I" Suspensio n Strings	Pilot Suspension Strings
Power frequency withstand voltage of the string with arcing horns and corona control rings / grading rings under wet conditions	kV(rms)			
Impulse flashover voltage (peak) under dry conditions				
1) Positive	kV			

2) N	Negative	kV	
Impulse wi under dry o	thstand voltage (peak) conditions		
1) F	Positive	kV	
2) N	Negative	kV	
	ollution withstand voltage rings with anti-fog disc	kV(rms)	
Minimum o	corona extinction voltage conditions	kV(rms)	
	rference voltage under dry at 1MHz, at 154kV	Micro Volts	
	al strength of the complete tring along with all iittings	kN	
across any insulator st voltage (n	voltage (in percentage) v disc in the complete tring under phase to earth ot applicable for string with insulator units)	%	
Number of string	insulator units in each		

C . 17 - Insulator Strings (Suspension Sets For 220 kV Lines) $\,$ (Continued) $\,$ (To be filled up by the Bidder)

	Unit	Single "I" Suspensi on Strings	Double "I" Suspension Strings	Pilot Suspension Strings
Overall length of the set including clamp and all fittings (specify the tolerance also)	mm			
Weight of the set, complete with all fittings and arcing horns	kg			
Weight of the counter-weights	kg			
Minimum arcing gap distance	mm			
Maximum magnetic power loss of the suspension assembly	Watts			
Slipping strength of the suspension assembly (clamp torque Vs. slip curve shall be enclosed)	kN			
Particulars of Standard/AGS pre- formed armour rod set for suspension assembly		Standard Or, AGS	Standard Or, AGS	Standard Or, AGS
1) No. of rods per set	No.			
2) Direction of the lay				
Overall length after fitting on the conductor	mm			
A) Actual length of each rod along its helix	mm			
5) Diameter of each rod	mm			
6) Tolerance in				
a) Diameter of each rod	+/- mm			
b) Length of each rod	+/- mm			
c) Difference of length between the longest and shortest rod in a set 7) Type of Aluminium alloy used for manufacture of PA rods	+/- mm			
8) UTS of each rod	kg/mm ²			

C . 17 - Insulator Strings (Suspension Sets For 220 kV Lines) $\,$ (Continued) $\,$ (To be filled up by the Bidder)

	Unit	Single "I" Suspension Strings	Double "I" Suspensio n Strings	Pilot Suspension Strings
Particular of Elastomer (for AGS clamps only)				
1) Supplier of elastomer				
2) Type of elastomer				
3) Shore hardness of elastomer				
Temperature range for which elastomer is designed	°C			
5) Moulded on insert	yes/no			
Purity of Zinc used for galvanising	%			
Minimum No. of one minute dips the ferrous parts can withstand in Standard Preece Test	No.			
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq. m			

C . 18 - Insulator Strings (Tension Sets For 220 kV Lines) (To be filled up by the Bidder)

	Unit	Single Tension Strings	Double Tension Strings
Power frequency withstand voltage of the string with arcing horns and corona control rings / grading rings under wet conditions	kV(rms)		
Impulse flashover voltage (peak) under dry conditions			
1) Positive	kV		
2) Negative	kV		
			1

Impulse withstand voltage (peak) under dry conditions		
1) Positive	kV	
2) Negative	kV	
Salt-fog pollution withstand voltage (only for strings with anti-fog units)	kV (rms)	
Minimum corona extinction voltage under dry conditions	kV(rms)	
Radio interference voltage under dry conditions at 1MHz, at 105kV	Micro Volts	
Mechanical strength of the complete insulator string along with all hardware fittings	kN	
Maximum voltage (in percentage) across any disc in the complete insulator string under phase to earth voltage (not applicable for string with composite insulator units)	%	
Number of insulator units in each string		
Overall length of the set including clamp and all fittings (specify the tolerance also)	mm	

C . 18 - Insulator Strings ($Tension\ Sets\ For\ 220\ kV\ Lines$) $\$ (Continued) ($To\ be\ filled\ up\ by\ the\ Bidder$)

	Unit	Single Tension Strings	Double Tension Strings
Weight of the set, complete with all fittings and arcing horns	kg		
Minimum arcing gap distance	mm		
Electrical resistance of the complete tension assembly along with jumper connection	ohms		
Slipping strength of the tension assembly	kN		
Purity of Zinc used for galvanising	%		
Minimum No. of one minute dips the ferrous parts can withstand in Standard Preece Test	No.		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq. m		

C . 19 - Insulator Strings (Suspension Sets For 400 kV Lines) (To be filled up by the Bidder)

	Unit	Single "I" Suspension Strings	Pilot Suspension Strings
Power frequency withstand voltage of the string with arcing horns and corona control rings / grading rings under wet conditions	kV(rms)		
Switching surge withstand voltage (peak) under wet conditions			
1) Positive	kV		
2) Negative	kV		
Impulse flashover voltage (peak) under dry conditions			
1) Positive	kV		
2) Negative	kV		
Impulse withstand voltage (peak) under dry conditions			
1) Positive	kV		
2) Negative	kV		
Salt-fog pollution withstand voltage (only for strings with anti-fog units)	kV (rms)		
Minimum corona extinction voltage under dry conditions	kV(rms)		
Radio interference voltage under dry conditions at 1MHz, at 305kV	Micro Volts		
Mechanical strength of the complete insulator string along with all hardware fittings	kN		
Maximum voltage (in percentage) across any disc in the complete insulator string under phase to earth voltage (not applicable for string with composite insulator units)	%		
Number of insulator units in each string			

C.19 - Insulator Strings (Suspension Sets For 400 kV Lines) (Continued)

(To be filled up by the Bidder)

	Unit	Single "I" Suspension	Pilot Suspension
		Strings	Strings
Overall length of the set including clamp and all fittings (specify the tolerance also)	mm		
Weight of the set, complete with all fittings and arcing horns	kg		
Weight of the counter-weights	kg		
Minimum arcing gap distance	mm		
Maximum magnetic power loss of the suspension assembly	Watts		
Slipping strength of the suspension assembly (clamp torque Vs. slip curve shall be enclosed)	kN		
Particulars of Standard/AGS pre-formed armour rod set for suspension assembly		Standard Or, AGS	Standard Or, AGS
1) No. of rods per set	No.		
2) Direction of the lay			
3) Overall length after fitting on the conductor	mm		
4) Actual length of each rod along its helix	mm		
5) Diameter of each rod	mm		
6) Tolerance in			
a) Diameter of each rod	+/- mm		
b) Length of each rod	+/- mm		
c) Difference of length between the longest and shortest rod in a set	+/- mm		
7) Type of Aluminium alloy used for manufacture of PA rods			
8) UTS of each rod	kg/mm		

C . 19 - Insulator Strings (Suspension Sets For 400 kV Lines) (Continued) (To be filled up by the Bidder)

	Unit	Single "I" Suspension Strings	Pilot Suspension Strings
Particular of Elastomer (for AGS clamps only)			
1) Supplier of elastomer			
2) Type of elastomer			
3) Shore hardness of elastomer			
Temperature range for which elastomer is designed	°C		
5) Moulded on insert	yes/no		
Purity of Zinc used for galvanising Minimum No. of one minute dips the ferrous parts can withstand in Standard Preece Test	% No.		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq. m		

C . 20 - Insulator Strings (Tension Sets For 400 kV Lines) (To be filled up by the Bidder)

	Unit	SingleTensio n Strings (Low Duty)	Double Tension Strings
Power frequency withstand voltage of the string with arcing horns and corona control rings / grading rings under wet conditions	kV(rms)		
Switching surge withstand voltage (peak) under wet conditions			
1) Positive	kV		
2) Negative	kV		
Impulse flashover voltage (peak) under dry conditions			
1) Positive	kV		
2) Negative	kV		
Impulse withstand voltage (peak) under dry conditions			

1) Positive	kV
2) Negative	kV
Salt-fog pollution withstand voltage (only for strings with anti-fog units)	kV (rms)
Minimum corona extinction voltage under dry conditions	kV(rms)
Radio interference voltage under dry conditions at 1MHz, at 305kV	Micro Volts
Mechanical strength of the complete insulator string along with all hardware fittings	kN
Maximum voltage (in percentage) across any disc in the complete insulator string under phase to earth voltage (not applicable for string with composite insulator units)	%
Number of insulator units in each string	

C . 20 - Insulator Strings ($Tension\ Sets\ For\ 400\ kV\ Lines$) $\$ (Continued) ($To\ be\ filled\ up\ by\ the\ Bidder$)

	Unit	SingleTensi on Strings (Low Duty)	Double Tension Strings
Overall length of the set including clamp and all fittings (specify the tolerance also)	mm		
Weight of the set, complete with all fittings and arcing horns	kg		
Minimum arcing gap distance	mm		
Electrical resistance of the complete tension assembly along with jumper connection	ohms		
Slipping strength of the tension assembly	kN		
Purity of Zinc used for galvanising	%		
Minimum No. of one minute dips the ferrous parts can withstand in Standard Preece Test	No.		
Minimum weight of Zinc coating per Sq.m. of the uncoated surface	gm/sq.m		

C . 21 - Tower Design Particulars : 132 kV Construction (To be filled up by the Bidder)

	Unit	
Maximum tension per phase, for purposes of tower design and application		
Suspension towers	Newton	
Tension towers	Newton	
Slack span side downleads, `per individual conductor'	Newton	
Maximum uplift per phase on each crossarm for purpose of tension tower design	Newton	
Maximum tension of earth conductor for purpose of tower design and application:		
Suspension towers	Newton	
Tension towers	Newton	
Earthwire slack span side downleads	Newton	
Maximum uplift of each earth conductor on the tower for purpose of tower design	Newton	
Minimum clearance between live metal and tower steelwork:		
i. with suspension insulator set swing 0°	mm	
with suspension insulator set swing 15°	mm	
with suspension insulator set swing 30°	mm	
with suspension insulator set swing 45°	mm	
with suspension insulator set swing 60°	mm	
ii. with jumper loop swing 0°	mm	
with jumper loop swing 10°	mm	
with jumper loop swing 20°	mm	
with jumper loop swing 30°	mm	
with jumper loop swing 40°	mm	
Insulator suspension set, unobstructed transverse swing angle from vertical	degrees	
Earth conductor suspension clamps, unobstructed transverse swing angle from vertical	degrees	

C . 22 - Tower Design Particulars : 220 kV Construction (To be filled up by the Bidder)

	Unit	
Maximum tension per phase, for purposes of tower design and application		
Suspension towers	Newton	
Tension towers	Newton	
Slack span side downleads, `per individual conductor'	Newton	
Maximum uplift per phase on each crossarm for purpose of tension tower design	Newton	
Maximum tension of earth conductor for purpose of tower design and application:		
Suspension towers	Newton	
Tension towers	Newton	
Earthwire slack span side downleads	Newton	
Maximum uplift of each earth conductor on the tower for purpose of tower design	Newton	
Minimum clearance between live metal and tower steelwork:		
i. with suspension insulator set swing 0°	mm	
with suspension insulator set swing 15°	mm	
with suspension insulator set swing 30°	mm	
with suspension insulator set swing 45°	mm	
with suspension insulator set swing 60°	mm	
ii. with jumper loop swing 0°	mm	
with jumper loop swing 10°	mm	
with jumper loop swing 20°	mm	
with jumper loop swing 30°	mm	
with jumper loop swing 40°	mm	

Insulator suspension set, unobstructed transverse swing angle from vertical	degree s	
Earth conductor suspension clamps, unobstructed transverse	degree s	
swing angle from vertical	5	
Earth conductor maximum shielding angle from vertical at	degree	
tower attachment point over outer line conductors	S	

C.23 - Tower Design Particulars: 400 kV Construction (To be filled up by the Bidder)

	Unit
Maximum tension per phase, for purposes of tower design and application	
Suspension towers	Newton
Tension towers	Newton
Slack span side downleads, `per individual conductor'	Newton
Maximum uplift per phase on each crossarm for purpose of tension tower design	Newton
Maximum tension of earth conductor for purpose of tower design and application:	
Suspension towers	Newton
Tension towers	Newton
Earthwire slack span side downleads	Newton
Maximum uplift of each earth conductor on the tower for purpose of tower design	Newton
Minimum clearance between live metal and tower steelwork:	
 i. with suspension insulator set swing 0° 	mm
with suspension insulator set swing 15°	mm
with suspension insulator set swing 30°	mm
with suspension insulator set swing 45°	mm
with suspension insulator set swing 60°	mm
ii. with jumper loop swing 0°	mm
with jumper loop swing 10°	mm
with jumper loop swing 20°	mm
with jumper loop swing 30°	mm

with jumper loop swing 40°	mm	
Insulator suspension set, unobstructed transverse swing angle from vertical	degree s	
Earth conductor suspension clamps, unobstructed transverse	degree	
swing angle from vertical	S	
Earth conductor maximum shielding angle from vertical at	degree	
tower attachment point over outer line conductors	S	

C . 24 - Tower Design Particulars (Common for all Towers) (To be filled up by the Bidder)

	Unit		
Maximum ratio of unsupported length of steel compression member to their least radius of gyration:			
Leg members, ground wire peak members and lower members of the crossarms in compression			
Other members carrying computed stresses Redundant members			
Tension only members			
	-	Mild steel	High yield steel
Maximum ultimate stresses, for checking tower designs not	-		
subjected to test (unless otherwise approved) :			
Compression members, Bidder to indicate his design Assumptions	N/mm		
Tension members (elastic limit)	N/mm		
Shear on bolts	N/mm		
Bearing on bolts	N/mm		

C . 25 - Particulars Of Double Circuit Towers : 132 kV Construction (To be filled up by the Bidder)

TYPE OF TOWER	Unit	DA	DB	DC	DD
Type of insulator sets		Suspensi on	Tension	Tension	Tensio n
Maximum angle of deviation	degree				
Normal span length	m				
Minimum ground clearance of line conductor at 85°C, normal ground	m				
Sag of line conductor in normal span length at 85°C	m				
Maximum distance of line conductor below crossarm	m				
Height above ground of bottom conductor Crossarm	m				
Minimum height of earth conductors above					
upper line conductor : at tower	m				
: at mid-span	m				
Vertical spacing between line conductors at tower:					
Minimum	m				
Actual	m				
Overall tower height	m				
Maximum differential foundation movement permitted under ultimate loads	mm				
Clearance between conductors of one circuit and tower climbing leg of the other circuit:					
Minimum	m				

Actual	m		
Horizontal distance, from tower centre line of insulator attachments	m		
Horizontal distance, from tower centre line of			
earth conductors	m		

C . 25 - Particulars Of Double Circuit Towers : 132 kV Construction (Continued) (To be filled up by the Bidder)

TYPE OF TOWER	Unit	DA	DB	DC	DD
Tower body dimensions at bottom crossarm level (transverse x longitudinal)	m				
Overall tower base dimensions at ground line (transverse x longitudinal): Maximum for standard height towers	m				
Actual for standard height towers	m				
Total transverse overturning moment at ground line of standard height tower.	kN-m.				
Mass of complete standard height tower above ground line (including bolts/nuts; bolts/nuts to be indicated separately)	kg				
Mass of tower body extension above ground line:					
3 metre body extension only	kg				
6 metre body extension only	kg				
9 metre body extension only	kg				
12 metre body extension only	kg		-	-	-
18 metre body extension only	kg		-	-	-

C . 26 - Particulars Of Double Circuit Towers : 220 kV Construction (To be filled up by the Bidder)

PE OF TOWER	Unit	DA	DB	DC	DD
-------------	------	----	----	----	----

Type of insulator sets		Suspensio n	Tension	Tensi on	Tension
Maximum angle of deviation	degree				
Normal span length	m				
Minimum ground clearance of line conductor at 85 °C, normal ground	m				
Sag of line conductor in normal span length at 85 °C	m				
Maximum distance of line conductor below crossarm	m				
Height above ground of bottom conductor crossarm	m				
Minimum height of earth conductors above					
upper line conductor : at tower	m				
: at mid-span	m				
Vertical spacing between line conductors at tower:					
Minimum	m				
Actual	m				
Overall tower height	m				
Maximum differential foundation movement permitted under ultimate loads	mm				
Clearance between conductors of one circuit and tower climbing leg of the other					
circuit : Minimum	m				
Actual	m				
Horizontal distance, from tower centre line of					
insulator attachments	m				
Horizontal distance, from tower centre line of					
earth conductors	m				

C . 26 - Particulars Of Double Circuit Towers : 220 kV Construction $\,$ (Continued) $\,$ (To be filled up by the Bidder)

TYPE OF TOWER	Unit	DA	DB	DC	DD
Tower body dimensions at bottom crossarm level (transverse x longitudinal)	m				
Overall tower base dimensions at ground line					
(transverse x longitudinal) Maximum for standard height towers	m				
Actual for standard height towers	m				
Total transverse overturning moment at ground line of standard height tower	kg- m.				
Mass of complete standard height tower above ground line (including bolts/nuts; bolts/nuts to be indicated separately)	kg				
Mass of tower body extensions above ground line					
3 metre body extension only	kg				
6 metre body extension only	kg				
9 metre body extension only	kg				
12 metre body extension only	kg		-	-	-
18 metre body extension only	kg		-	-	-
25 metre body extension only	kg		-	-	-

C . 27 - Particulars Of Double Circuit Towers : 400 kV Construction (To be filled up by the Bidder)

TYPE OF TOWER	Unit	DA	DB	DC	DD
Type of insulator sets		Suspen sion	Tensi on	Tensio n	Tension
Maximum angle of deviation	degr ee				
Normal span length	m				
Minimum ground clearance of line conductor at 85 °C, normal ground	m				
Sag of line conductor in normal span length at 85 °C	m				

	_		
Maximum distance of line conductor below crossarm	m		
Height above ground of bottom conductor crossarm	m		
Minimum height of earth conductors above			
upper line conductor : at tower	m		
: at mid-span	m		
Vertical spacing between line conductors at tower:			
Minimum	m		
Actual	m		
Overall tower height	m		
Maximum differential foundation movement permitted under ultimate loads	mm		
Clearance between conductors of one circuit and tower climbing leg of the other circuit:			
Minimum	m		
Actual	m		
Horizontal distance, from tower centre line of			
insulator attachments	m		
Horizontal distance, from tower centre line of			
earth conductors	m		

C . 27 - Particulars Of Double Circuit Towers : 400 kV Construction (Continued) (To be filled up by the Bidder)

TYPE OF TOWER	Unit	DA	DB	DC	DD
Tower body dimensions at bottom crossarm level (transverse x longitudinal)	m				
Overall tower base dimensions at ground line (transversex longitudinal) Maximum for standard height towers	m				
Actual for standard height towers	m				

Total transverse overturning moment at ground line of standard height tower	kg- m.			
Mass of complete standard height tower above ground line (including bolts/nuts; bolts/nuts to be indicated separately)	kg			
Mass of tower body extensions above ground line				
3metre body extension only	kg			
6metre body extension only	kg			
9metre body extension only	kg			
12metre body extension only	kg	-	-	-
18metre body extension only	kg	-	-	-
25metre body extension only	kg	-	-	-

C . 28 - Foundation Design Particulars (To be filled up by the Bidder)

	Unit
Assumed density of Plain Cement Concrete (PCC) for foundation in dry soil	kg/m ³
Assumed density of Plain Cement Concrete (PCC) for foundation in presence of sub-soil water	kg/m ³
Assumed density of Re-inforced Cement Concrete (RCC) for foundation in dry soil	kg/m ³
Assumed density of Re-inforced Cement Concrete (RCC) for foundation in presence of sub-soil water	kg/m ³
28 day concrete cube strength (characteristic strength for M-20 concrete)	N/mm ²
28 day concrete cube strength (characteristic strength for M-15 concrete)	N/mm ²
Minimum proportion of stub load to be allowed for in the design of stub cleats	%
Density of all type of soils: 1) under dry conditions	kg/m³
2) in presence of surface water	kg/m³
3) in presence of sub-soil water	kg/m ³

Ultimate bearing capacity of the soil: 1) normal soil under dry condition	kN/m²	
2) normal soil in presence of surface as well as sub-soil water	kN/m ²	
3) wet black cotton soil	kN/m²	
4) fissured rock (both for dry and wet)	kN/m²	
5) hard rock	kN/m²	
Angle of repose for : 1) dry soil	Degree	
2) wet soil due to presence of surface/ sub-soil water	Degree	
3) wet black cotton soil	Degree	
4) dry fissured rock	Degree	
5) wet fissured rock	Degree	
Ultimate bond between steel and concrete	kN/m ²	

C . 29 - Quality Of Materials (To be filled up by the Bidder)

Particulars	Unit						
Towers:		Mild	steel	High	h tensile steel		
		Steel	Steel	Steel	Stee	el nuts	
		members	nuts and bolts	member s	and	bolts	
Grade/standard							
Tensile breaking stress	2 N/mm						
Elongation on breaking	%						
Gauge length of specimen	mm						
Diameter of specimen	mm						
Yield point as percentage of breaking stress							
Insulators and fittings:		Insula	con	se and arth ductor fittings			
		Steel	Malleable cast iron	Insulator caps	Steel	Malleak le cast	

				iron
Grade/standard				
Tensile breaking stress	2 N/mm			
Elongation on breaking	%			
Gauge length of specimen	mm			
Diameter of specimen	mm			
Yield point as percentage of breaking stress	%
